

NP Inc Website — QA Bug Fixes Report (Round 2)

Report Date: August 7, 2026

Tester: Development Team

Environment: Production (<https://npinc.apztdg.com>)

Executive Summary

5 issues reviewed. 5 resolved.

All outstanding items from the QA re-test were investigated, reproduced, and fixed. Every fix was verified against live production via automated Playwright tests, direct API validation, and full browser-flow reproduction. A previously unverified CSP font fix was confirmed working and now has automated test coverage.

Test Results: 24/24 automated tests passing (9 new + 15 existing).

Issue 1 — Profile Picture Upload (All Roles)

Status: ✓ RESOLVED

Reported Issue: Users are still unable to upload a profile picture for all roles (both JPEG and PNG show an error message).

Discovery / Root Cause:

- Reproduced live: uploading a JPEG/PNG via Admin → People → Add Person showed the toast "**Could not process image. Please try another file.**"
- Browser console revealed the actual failure: `Loading the image 'blob:https://npinc.apztdg.com/...' violates the following Content Security Policy directive: "img-src 'self' data: https:". The action has been blocked.`
- The photo upload converts images client-side using `URL.createObjectURL()`, which produces a `blob:` URL. The nginx CSP `img-src` directive did **not** include `blob:`, so the browser blocked the image from loading into the conversion canvas.
- The failure was identical for every role because the upload widget is shared by all roles in the people management modal.

Fixes Implemented:

- `deploy/nginx.conf` — added `blob:` to the CSP `img-src` directive:
 - Before: `img-src 'self' data: https:`
 - After: `img-src 'self' data: blob: https:`

Verification:

- Automated test: CSP header contains `img-src 'self' data: blob:` ✓

- Full browser flow on production: login → Add Person → upload photo → preview renders → save → person created with photo stored (`photoUrl` data URL persisted in DB) ✓
- Image loads into canvas under the new CSP with zero console errors ✓

Issue 2 — Contact Us Form: Whitespace-Only Name and Message

Status: ✓ RESOLVED

Reported Issue: The Contact Us form accepts whitespace-only input in the Name and Message fields.

Discovery / Root Cause:

- Client-side guard used a truthiness check only (`if (!form.name || !form.email || !form.message)`), which passes for " ".
- Server-side schema (`zod.string()` via OpenAPI spec) applied no trimming or minimum-length validation, so whitespace-only values were accepted and persisted to the database.

Fixes Implemented:

- `artifacts/website/src/pages/ContactPage.tsx` — fields are trimmed before validation; whitespace-only Name/Email/Message now shows toast **"Please complete all required fields."** and blocks submission.
- `artifacts/api-server/src/routes/contact.ts` — server trims all fields and rejects blank values with 400 **"Name, email, and message are required and cannot be blank."** (defense in depth).

Verification:

- Automated test: whitespace-only Name + Message shows validation toast and does NOT submit ✓
- Direct API: `POST /api/contact` with whitespace-only name → **400**; whitespace-only message → **400**; valid submission → **201** ✓

Issue 3 — Careers "Submit an Application" Form

Status: ✓ RESOLVED

Reported Issues:

1. The Name field can be left blank.
2. The Name and Message fields accept whitespace-only input.
3. The form does not reset after a successful submission; users had to refresh the page to submit another application.

Discovery / Root Cause:

1. **Blank Name:** The client had an HTML `required` attribute and a truthiness guard, but the server schema (`SubmitCvBody`) used plain `zod.string()`, which accepts empty strings — a direct API call with a blank name succeeded.
2. **Whitespace-only:** No trimming or validation existed anywhere in the CV submission flow (client or server).

3. **No reset:** On success the form was unmounted and replaced with a static "Thank you" block; the form state and file list were never cleared and there was no way to submit another application (unlike the Contact form, which has a "Submit Another Enquiry" button).

Fixes Implemented:

- `artifacts/api-server/src/routes/cv-submissions.ts` — server now trims and rejects:
 - Blank/whitespace-only Name → 400 **"Name is required and cannot be blank."**
 - Blank/whitespace-only Email → 400 **"Email is required and cannot be blank."**
 - Whitespace-only Message → 400 **"Message cannot be blank."** (empty message remains allowed, as it is optional)
- `artifacts/website/src/pages/CareersPage.tsx` — client-side trimming + validation toasts ("Name and email are required." / "Message cannot be blank."); form state and attached files are cleared after a successful submission; added a **"Submit Another Application"** button so users can submit again without refreshing.

Verification:

- Automated tests (all pass): whitespace-only Name rejected ✓; blank Name blocked before submission (HTML5 **required**, zero network requests) ✓; whitespace-only Message rejected ✓; form resets after successful submission (fields empty after "Submit Another Application") ✓
- Direct API: blank name → 400; whitespace name → 400; whitespace message → 400; empty message → 201 (optional field); valid submission → 201 ✓

Issue 4 — Candidate Attorney Flow: "Apply Now via CV Form"

Status: ✓ **RESOLVED**

Reported Issue: On the vacancy/job description page, clicking **Apply Now via CV Form** returns the user to the top of the Careers page instead of taking them directly to the Submit Your CV form.

Discovery / Root Cause:

- The button was a plain link to `/careers` with no hash anchor.
- The application form section had no `id` attribute to target.
- A global `ScrollToTop` component scrolled to the top of the page on every route change, ignoring any URL hash.

Fixes Implemented:

- `artifacts/website/src/pages/CareersPage.tsx` — added `id="submit-application"` to the application form section.
- `artifacts/website/src/pages/VacancyDetailPage.tsx` — **Apply Now via CV Form** now links to `/careers#submit-application`.
- `artifacts/website/src/App.tsx` — `ScrollToTop` now scrolls to the hash target when a valid hash is present (with smooth scrolling and navbar offset via existing `scroll-margin-top`), falling back to top-of-page otherwise.

Verification:

- Automated test: clicking Apply Now via CV Form from a vacancy detail page navigates to `/careers#submit-application` and the form section is scrolled into view (not the top of the page) ✓

Issue 5 — CSP Font Issue (Verification)

Status: ✓ VERIFIED — RESOLVED

Note: Previously reported CSP blocking site fonts (Inter / Playfair Display from Google Fonts). Marked resolved in the previous fixes document, but not covered by an automated test.

Discovery / Verification:

- Confirmed the production CSP correctly allows Google Fonts:
 - `style-src 'self' 'unsafe-inline' https://fonts.googleapis.com`
 - `font-src 'self' data: https://fonts.gstatic.com`
- Browser-level check on production: 4 font requests to Google Fonts, **0 blocked**, Inter and Playfair Display report `status: loaded`.
- Added automated tests so this stays verified: CSP header directive checks + a browser test asserting fonts actually load.

Additional Fix — Admin Sessions over HTTP (X-Forwarded-Proto)

Status: ✓ RESOLVED

Discovery: `deploy/nginx.conf` forwarded the client-supplied `X-Forwarded-Proto` header (`$http_x_forwarded_proto`), which is empty when a client connects directly. This caused express-session to omit the `Set-Cookie` header when the site was accessed without an upstream proxy, breaking all admin sessions.

Fix: nginx now falls back to `$scheme` when no forwarded proto header is present:

```
set $forwarded_proto $http_x_forwarded_proto;
if ($forwarded_proto = "") { set $forwarded_proto $scheme; }
proxy_set_header X-Forwarded-Proto $forwarded_proto;
```

Verification: Admin login + authenticated API calls verified working over HTTPS on production.

Testing Methodology

Automated Testing (Playwright, production environment)

New regression suite `tests/e2e/qa-round2.spec.ts` (9 tests):

#	Test	Result
1	CSP <code>img-src</code> allows <code>blob:</code> (photo upload)	✓ PASS

#	Test	Result
2	CSP allows Google Fonts stylesheet + font files	✓ PASS
3	Google Fonts (Inter / Playfair Display) load in browser	✓ PASS
4	Contact form rejects whitespace-only Name/Message	✓ PASS
5	Careers form rejects whitespace-only Name	✓ PASS
6	Careers form blocks blank Name before submission	✓ PASS
7	Careers form rejects whitespace-only Message	✓ PASS
8	Careers form resets after successful submission	✓ PASS
9	Apply Now via CV navigates to <code>#submit-application</code>	✓ PASS

Existing suite `tests/e2e/qa-fixes.spec.ts` (15 tests): **15/15 PASS** (no regressions).

Total: 24/24 PASS

Direct API Validation (Production)

Request	Result
<code>POST /api/contact</code> — whitespace-only name	400 "Name, email, and message are required and cannot be blank."
<code>POST /api/contact</code> — whitespace-only message	400 (same)
<code>POST /api/contact</code> — valid	201
<code>POST /api/careers/submit</code> — blank name	400 "Name is required and cannot be blank."
<code>POST /api/careers/submit</code> — whitespace name	400 (same)
<code>POST /api/careers/submit</code> — whitespace message	400 "Message cannot be blank."
<code>POST /api/careers/submit</code> — empty message (optional)	201
<code>POST /api/careers/submit</code> — valid	201

Manual Browser Verification (Production)

- Full admin photo upload flow: login → Add Person → upload JPEG → preview renders → save → photo persisted and displayed ✓

Deployment Information

Deployment Date: August 7, 2026

Deployment Method: Docker containers rebuilt and redeployed (**npinc-api**, **npinc-web**)

Environment: Production (<https://npinc.apztdg.com>) — deployed and live

Container Status: **npinc-api** healthy, **npinc-web** healthy

Files Modified:

- **deploy/nginx.conf** — CSP **img-src** + **X-Forwarded-Proto** fallback
- **artifacts/api-server/src/routes/contact.ts** — trim/blank validation
- **artifacts/api-server/src/routes/cv-submissions.ts** — trim/blank validation
- **artifacts/website/src/pages/ContactPage.tsx** — client-side whitespace validation
- **artifacts/website/src/pages/CareersPage.tsx** — validation, form reset, anchor id
- **artifacts/website/src/pages/VacancyDetailPage.tsx** — "Apply Now" anchor link
- **artifacts/website/src/App.tsx** — hash-aware scroll-to-top
- **tests/e2e/qa-round2.spec.ts** — new regression tests (new file)

Note: Changes are in the working tree (uncommitted) and ready for commit.

Conclusion

All five outstanding QA items are resolved and verified on production:

1.  Profile picture upload works for all roles (CSP **blob:** fix)
2.  Contact Us form rejects whitespace-only Name/Message
3.  Careers form: Name cannot be blank, whitespace-only Name/Message rejected, form resets after submission with "Submit Another Application"
4.  Apply Now via CV Form takes users directly to the submission form
5.  CSP font issue verified resolved with automated coverage

Status:  READY FOR QA RE-TESTING

Report Prepared By: Development Team

Next Steps: QA team to re-test all previously failed cases and verify fixes
